UI UX – Assignment 01

DOMAIN : Hotel Booking Websites

WEBSITE : Booking.com

NAME: Aayush Pranav Vyas

PRN: 1262240233

ROLL NO: 01

PANEL: F (F1)

WEBSITE: Booking.com

PROBLEM STATEMENT-

Critical Analysis of Interfaces: Analyse any one interface (website or mobile app) that you have interacted with that could be designed better. Focus on the interface design problems, rather than their engineering faults or business problems. Comment on its learnability, usability, consistency and metaphors.

PRIMARY USER PERSONA

The primary user persona is a college student or young working professional aged 18–30 who uses hotel-booking websites to find affordable and convenient accommodation for vacations, trips, or short stays. They prefer a simple, fast and easy-to-navigate interface with clear prices, ratings, photos, filters and booking information.

CHATGPT VERSION

Parameter	Booking.com	Rating
Learnability	Easy basic search, but information-heavy homepage/results can overwhelm first-time users.	8.5/10
Usability	Strong search, filters and hotel information; comparison	8.5/10

	can require extra effort.	
Consistency	Strong consistency in hotel cards, buttons, icons and interaction patterns.	9/10
Use of Metaphors	Familiar heart, map pin, star and search icons are easy to understand.	9/10
Navigation Structure	Clear core navigation, but many filters/categories can make exploration lengthy.	8/10
Visual Hierarchy	Important content is prominent, but promotional labels compete for attention.	7.5/10
Accessibility	Readable overall, though dense content and small secondary text can reduce ease of scanning.	7.5/10
Responsiveness	Adapts well across screens, though information-heavy listings can feel crowded on mobile.	8.5/10
Efficiency of Interaction	Search is quick, while detailed filtering and comparison add interactions.	8/10
Feedback & System Status	Selections, filters and booking actions generally provide visible feedback.	8.5/10
Error Prevention & Recovery	Validation helps, but complex policies and conditions can still confuse users.	8/10
Aesthetic & Minimalist Design	Professional appearance, but hotel cards contain many competing elements.	7/10
Content Readability	Main information is clear; policies and conditions can become text-heavy.	8/10
Search & Discoverability	Strong search and filtering by price, rating, facilities, location and more.	9/10
Performance Perception	Search and filtering feel responsive and provide an active interface response.	8.5/10
Trust & Credibility	Reviews, ratings, photos, policies and booking details support confidence.	9/10
Personalization	Saved properties and recommendations add personalization, though some can feel promotional.	8.5/10
User Satisfaction	Feature-rich and useful, but information overload can	8.5/10

	reduce simplicity.	

LEARNABILITY

How quickly a new user understands the interface.

Website	Rating	Points
Booking.com	8.5/10	1. Search destination, dates and guests are immediately understandable. 2. Hotel cards use a predictable layout for first-time users. 3. Familiar labels and icons reduce the need for guidance. 4. Too many offers, badges and options can initially feel overwhelming.

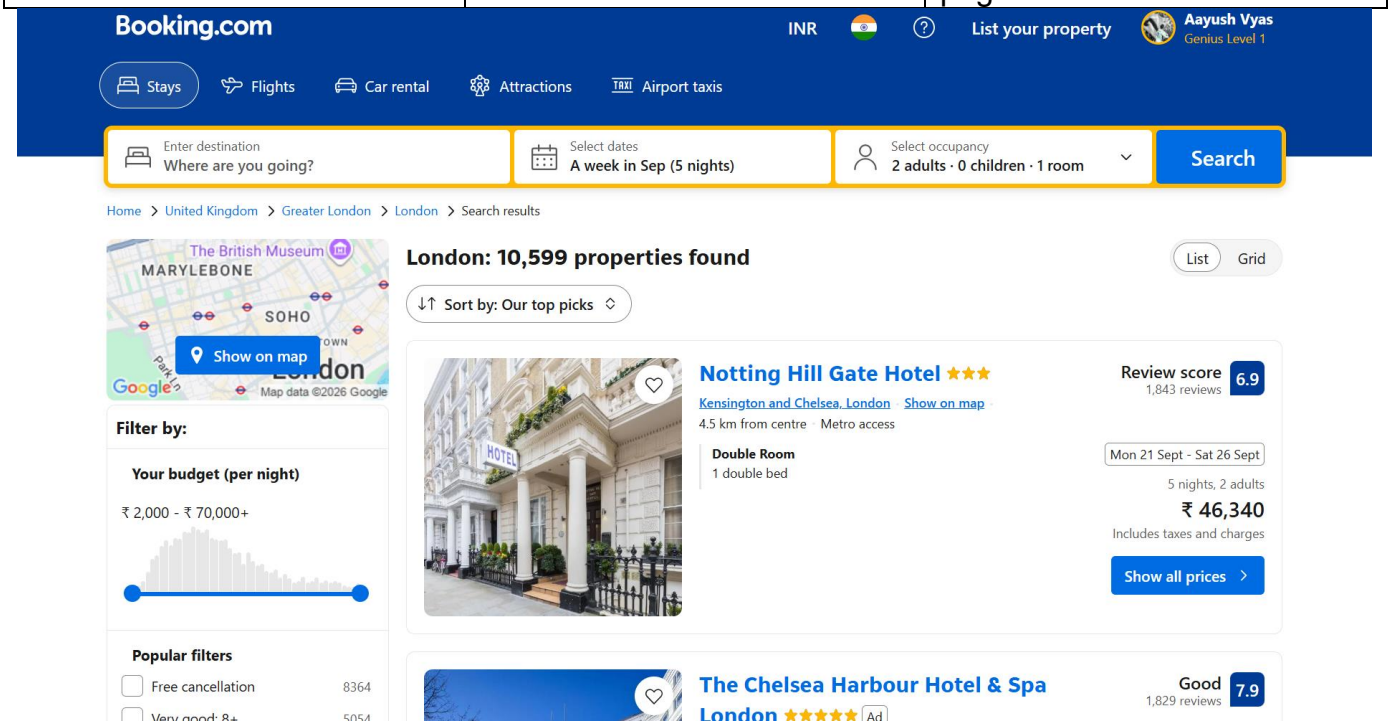

Booking.com homepage/search area

USABILITY

The ease with which users can complete hotel-search and booking tasks efficiently.

Website	Rating	Points
Booking.com	8.5/10	1. Search results provide price, rating, photos and key facilities. 2. Filters help narrow a large

		number of hotels quickly. 3. Property details are available before booking. 4. Comparing multiple hotels can require opening several pages.

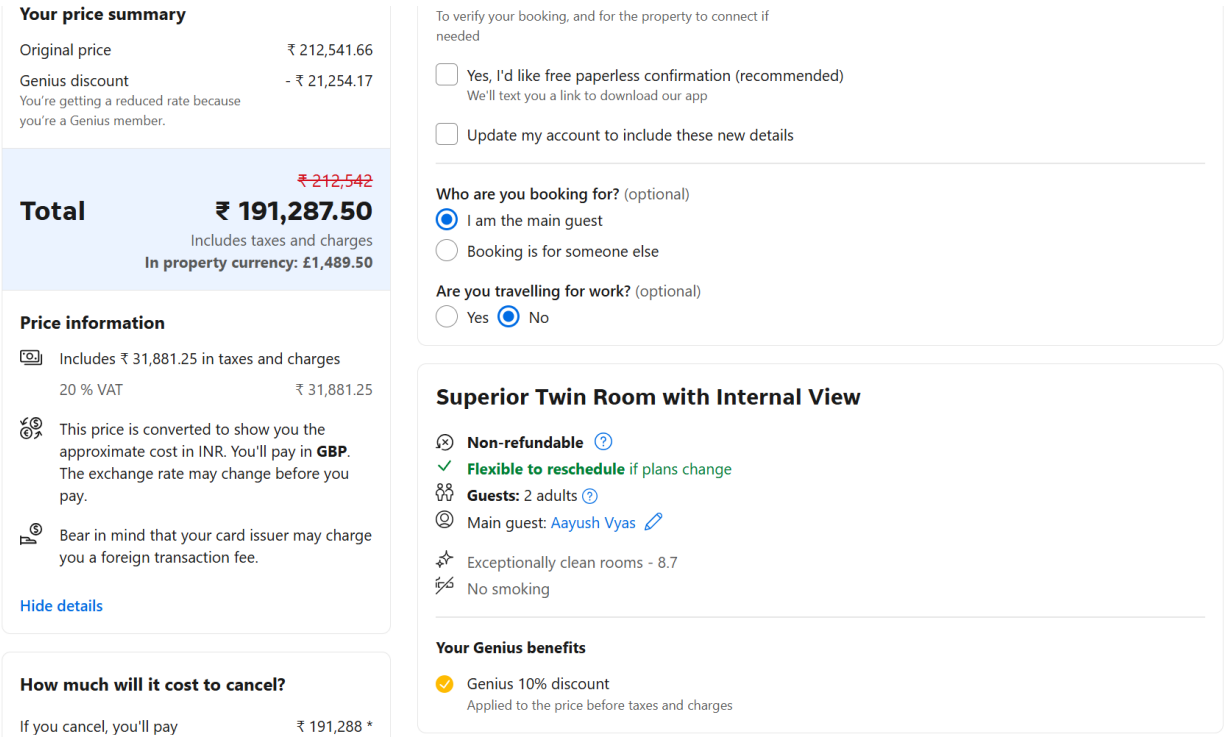

Booking.com hotel search/results page

ERROR PREVENTION AND RECOVERY

How well the interface helps users avoid mistakes and recover from them.

Website	Rating	Points
Booking.com	8/10	1. Required search information is clearly requested. 2. Validation helps prevent incomplete searches. 3. Users can change dates, guests and filters without restarting. 4. Cancellation conditions and room restrictions can still be confusing.

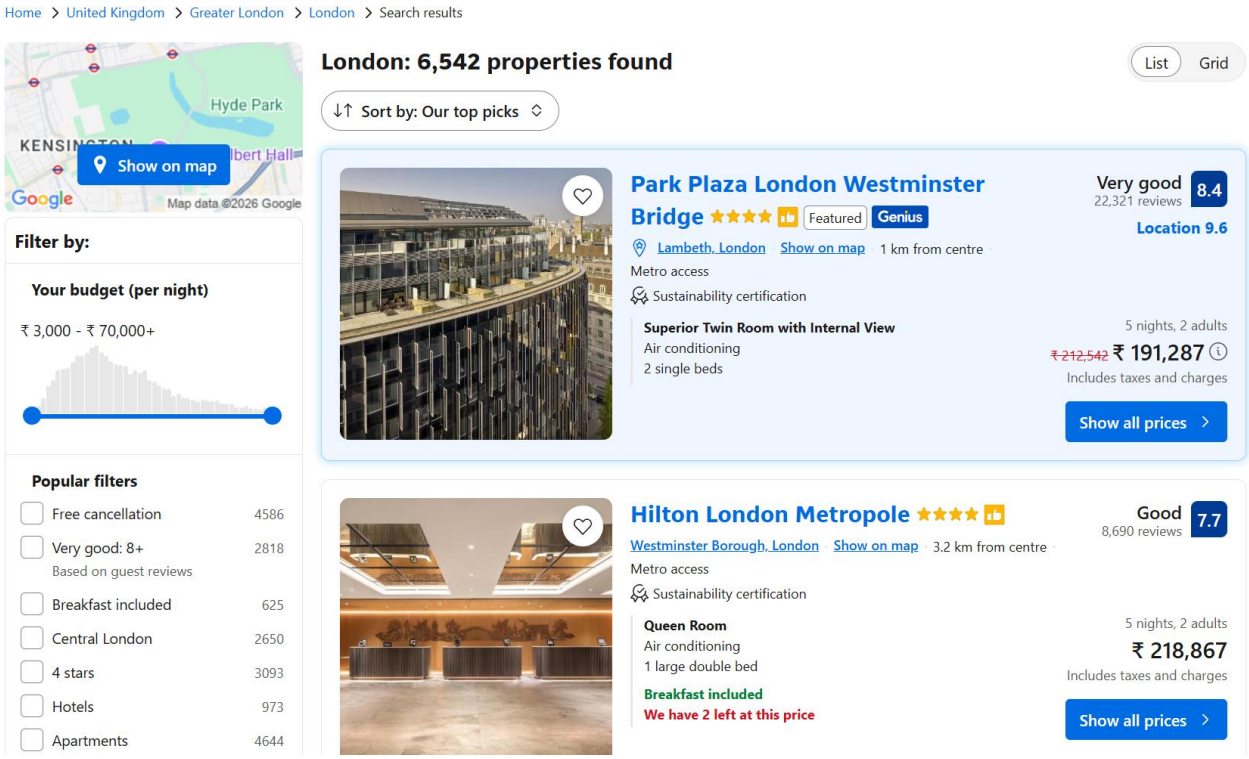

Error prevention / booking condition / validation proof

USE OF METAPHORS

Using familiar real-world icons and symbols to help users understand and navigate the interface easily.

Website	Rating	Points
Booking.com	9/10	1. Heart icon clearly represents saving a property. 2. Map pin represents hotel/location. 3. Star symbols communicate ratings/categories. 4. Search icon represents finding accommodation. 5. These familiar metaphors require little explanation.

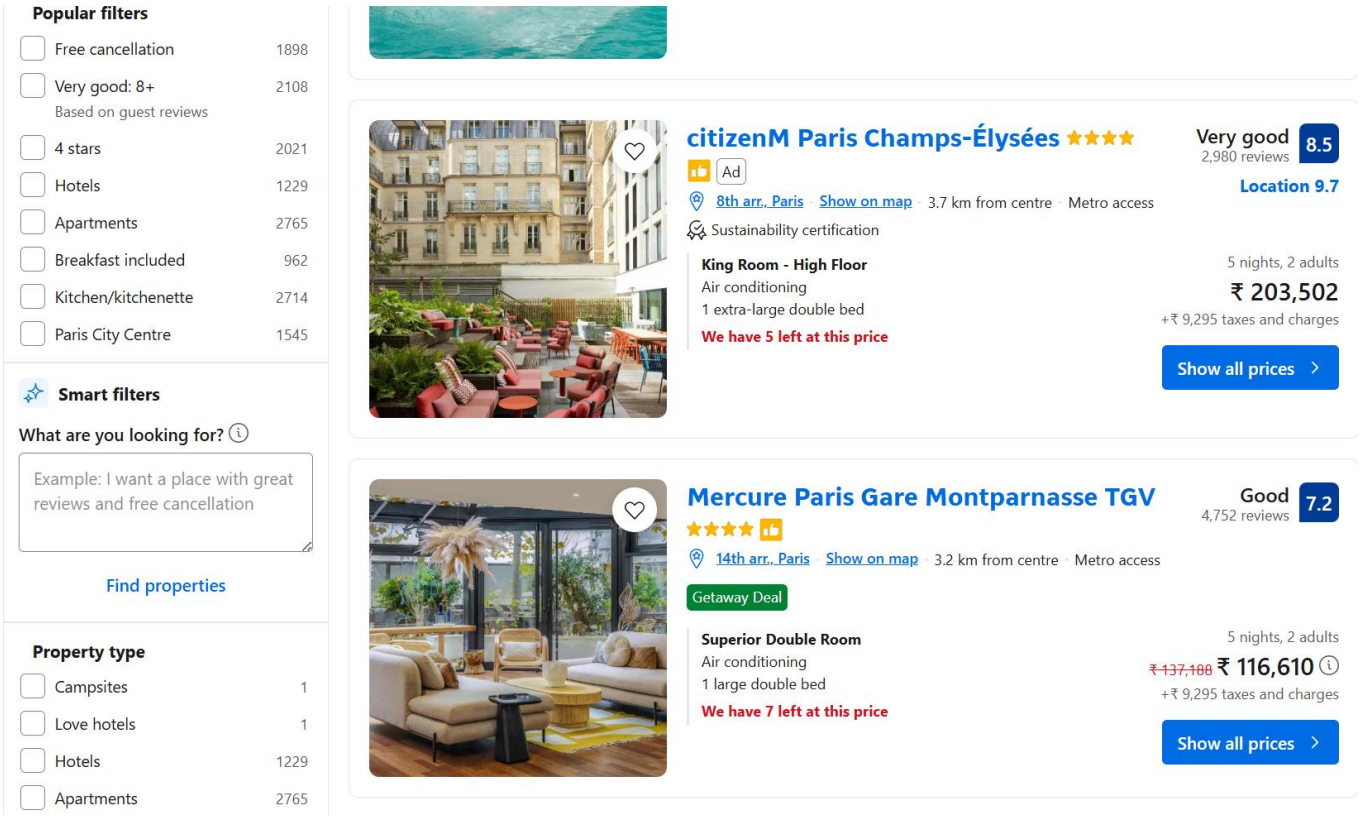

Icons/metaphors used on Booking.com

NAVIGATION STRUCTURE

Clarity and organization of menus, filters, links and information hierarchy.

Website	Rating	Points
Booking.com	8/10	1. Core booking actions are easy to locate. 2. Search results and filters are logically grouped. 3. Users can refine results without leaving the results page. 4. Many filters and categories can make exploration lengthy.

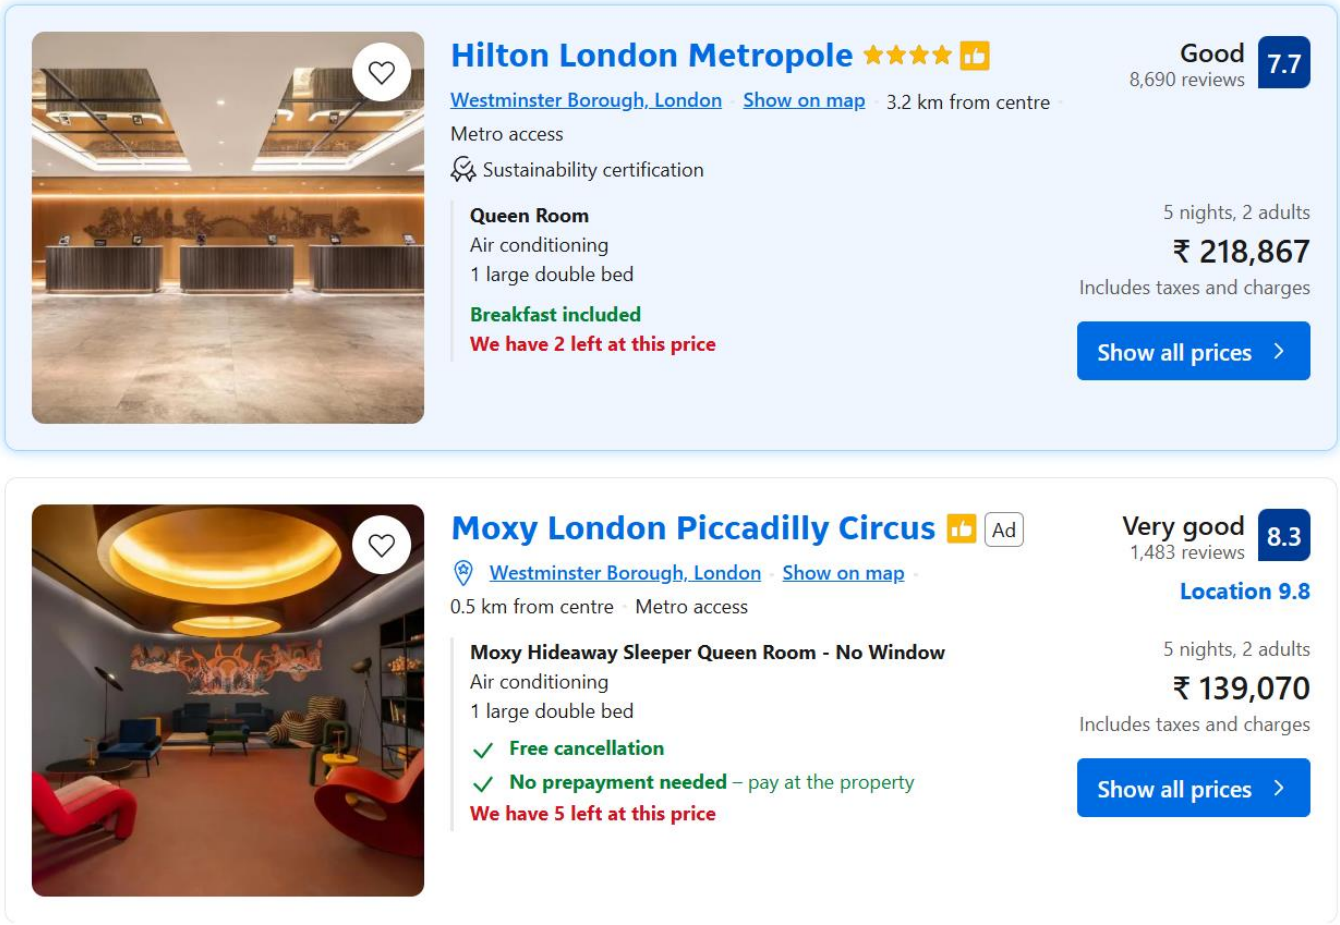

Navigation / filters

VISUAL HIERARCHY

How effectively size, spacing, contrast and emphasis guide user attention.

Website	Rating	Points
Booking.com	7.5/10	1. Hotel photos attract attention first. 2. Prices and ratings are visually prominent. 3. Discount labels and badges add useful emphasis. 4. Too many labels and promotional elements can compete with essential information.

Visual hierarchy / crowded hotel card

8 GOLDEN RULES OF INTERFACE DESIGN

Golden Rule	Booking.com
1. Strive for consistency	Hotel cards, colours, buttons, icons and interaction patterns remain largely consistent.
2. Seek universal usability	The main search flow is understandable to many users, though information density can overwhelm some users.
3. Offer informative feedback	Filters, searches and selections provide visible responses to user actions.
4. Design dialogs to yield closure	Booking progresses toward a clear reservation confirmation.
5. Prevent errors	Required fields and validation reduce incomplete searches; complex policies can still create confusion.
6. Permit easy reversal of actions	Users can change dates, filters and search parameters without restarting.
7. Keep users in control	Extensive filters and sorting options allow users to control the results.
8. Reduce short-term memory load	Important hotel information is shown on result cards, although the amount of information can

	increase cognitive load.

MAJOR UI/UX PROBLEMS IDENTIFIED

1. Information Overload

Hotel cards contain photos, ratings, prices, discounts, badges, facilities and policies, making scanning harder.

2. Filter Overload

Many filter categories provide control but can overwhelm first-time users.

3. Difficult Hotel Comparison

Users may need to open multiple property pages to compare important details.

4. Promotional Clutter

Discounts and promotional messages can compete with the information needed for decision-making.

5. Dense Policy Information

Cancellation rules and booking conditions can require careful reading.

OVERALL EVALUATION

Booking.com — Overall Rating: 8.3/10

Booking.com provides a strong hotel-booking experience, particularly in learnability, consistency, search, trust and use of familiar metaphors. The main design weakness is information density: promotional elements, filters and detailed hotel information can compete for attention. A simpler presentation, easier hotel comparison and more concise policy information would improve the interface.
